 **DRAGON**

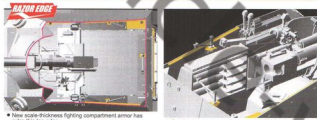

STEPS AHEAD.....ALWAYS!

Sd.Kfz.164 Nashorn 3 in 1

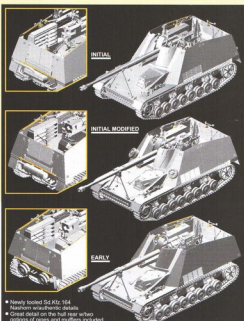

Smart Kit
Engineered for modeling enjoyment
Plastic parts with enhanced detail
Unprecedented value
Ready for instant assembly!

6386

**RAZOR EDGE**

- New scale-thickness fighting compartment armor has extra-thin top edge

- Fighting compartment waccurate interior detail

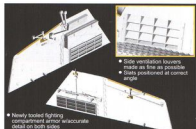

INITIAL

INITIAL MODIFIED

EARLY

- Newly tool-d Nashorn waccurate details
- Great detail on the hood rear waccuro options of pipes and mufflers included

- Newly tool-d fighting compartment armor waccurate detail on both sides

- Side ventilation louvers made as fine as possible
- Plate positioned at correct angle

**RAZOR EDGE**

- Two newly tool-d armor bins waccuro included

- Movable brackets can be positioned up/down

**RAZOR EDGE**

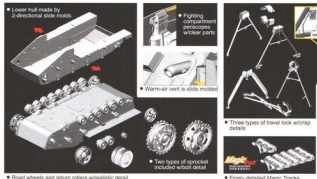

- Gun shield realistically produced waccuro armor newly tool-d

- Movable gun breech accurately reproduced in multiple parts

- Additional armor waccuro detail

- Newly tool-d glass plate finely produced waccuro seams
- Hatches and periscope cover can be assembled waccuro

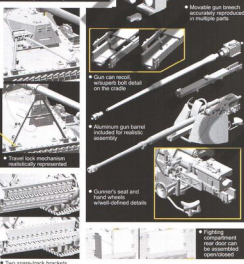

- Lower hull made by 2-directional side molds

- Fighting compartment periscopes waccuro parts

- Warm-air vent is slide molded

- Three types of travel lock waccuro details

- Gun can recoil, waccuro ball detail on the cradle

- Aluminum gun barrel included for realistic assembly

- Gunner's seat and hand wheels waccuro-defined details

- Fighting compartment rear door can be assembled waccuro

- Road wheels and return rollers waccuro detail

- Finely detailed Magic Tracks

- Two spare-track brackets included for different assembly

JAGDPANTZER IV L/70(V)

Smart Kit Inside Story

A lot on our plate!

What was special about the Jagdpanzer IV as a tank destroyer design was that it featured a fully armored superstructure to protect the crew of four. The fully enclosed structure was a huge improvement on what had gone before. This casemate was designed with sloping armor and enabled the vehicle to have a lower profile and better ballistic qualities. In fact, the vehicle's armor measured 80mm at its thickest point. These large armor plates of the superstructure were welded together to make the manufacturing process easier and faster, and they utilized an interlocking pattern.

When Dragon's project advisor examined the weld seams of these interlocking joints, he discovered the welds were not in a normal horizontal pattern. Instead they used a vertical pattern, which was a departure from standard procedure. In the same way, an inspection of Dragon's kit version will reveal exactly the same authentic pattern as is found on original vehicles!

Reach stage of perfection

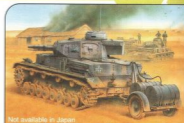

It's not often that plastic kit manufacturers own up to any imperfections in their kits. Yet this is the very case with Dragon's Jagdpanzer IV L/70. However, such an admission requires an explanation. The imperfection under consideration is the embossed characters "L-70" on the mantlet, this nomenclature (obviously referring to the type of long-barreled gun fitted on this tank destroyer. On the original vehicle, these embossed figures were roughly cast and aren't sharply rendered. While nice clean-cut characters on Dragon's 1/35 scale model would have looked more aesthetically pleasing, they wouldn't have been accurate or realistic. So Dragon has trod the path of historical accuracy, and carefully designed its mantlet to give the embossed "L-70" figures on the mantlet a much more rough-hewn appearance. The original vehicle had its casting imperfections, and these have been perfectly recreated on this model!

Finely honed and toned

This exciting kit boasts enhanced detail in every nook and cranny. Using Dragon's vast injection-molding experience, parts have been upgraded and improved. This is particularly evident in miniature elements such as the on-vehicle tools, where items are finer and more sharply detailed. This sharpness of detail is also evident in the tiny fender flap catches. Another area of improvement compared to previous Panzer III kits is in the numerous weld seams. Many components such as the gun shield, turret, glacis plate and engine deck have received upgraded weld seams to make the tank appear more realistic. Overall, this new Panzer III Ausf.N kit has been finely honed and toned to give an attractive and highly detailed replica.

Inside Story

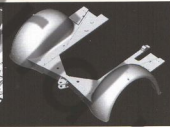

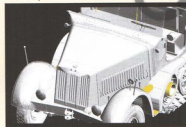

A good presentation goes a long way

Besides the best material have been chosen we also care about the most suitable presentation. Example is the photo-etched screens for the drop-sides and tailgate on the rear gun platform. The actual mesh pattern on the original vehicle is extremely difficult to reproduce in 1/35 scale. However, our primary photo-etched parts would do for this case. Dragon resorted to double-layer etching techniques to generate the screens, which allows the distinctive hump-over look to be better captured in those mesh screens. The result is a kit that looks more authentic and thus more satisfying to the modeler.

Sd.Kfz. 7/1 runs true to form

The Sd.Kfz. 7/1 is a classic and significant German half-track of WWII. One of the most difficult things to get right in this kit was the shape and proportions of the front cab. While it may not be noticeable to most modelers, the curve of the front fenders is realistically molded to mimic those on the original vehicle. Even the radiator grille on the cab are presented with specific direction just like the real one. The shape of the front cab is also true to scale while every bolt detail on the front cab is rendered.

Search, research and research again

Research is indisputably an essential factor when producing an accurate kit. Intensive research and investigation is necessary, but the design team charged with producing this kit faced a real problem – they found it extremely difficult sourcing detailed and useful wartime photos of the base-plate of the 2cm Flakvierling 38 cannon. Thus, the research literally took years until the point that sufficient information and technical information had been collected to reproduce this base. All available photos were examined to make sure every aspect of this part was manufactured as realistically as possible. There was no skimping on research for this Sd.Kfz. 7/1!

This series of 1:72 scale vehicles is designed for the discerning modeler who is seeking great levels of detail. Each kit contains more options and multi-material parts to help you achieve a superior finish to your model. Specific features vary from kit to kit, but may include such options as:

- ▶ metal tow cables
- ▶ individual track links
- ▶ zimmerit coating
- ▶ decals with an even wider selection of markings
- ▶ comprehensive choice of photo etched metal parts
- ▶ a very fine level of details

WING
TECH

Inside Story

No Heavy Metal Here

Dragon's 1/32 scale kit of the Bf110 is sharply detailed and faithfully mimics the appearance of the original aircraft. One example of the molding quality is the three different depths of panel lines on the wings and fuselage. The newly tooled fuselage included authentic-looking metal-skinned details such as rivets, while the wings possess various inspection covers. A wing gauge is also included. It may be made of plastic, but this kit offers a realistic light metal look!

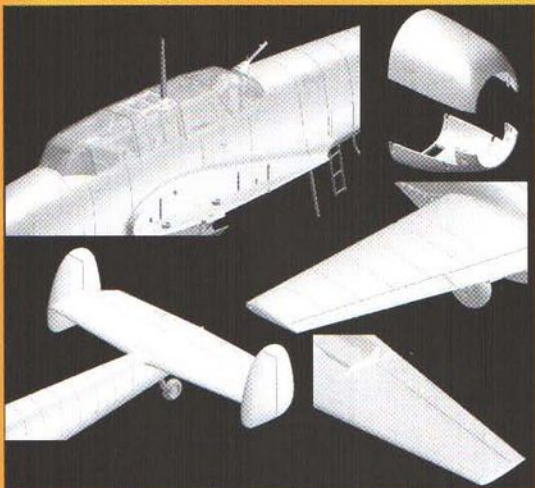

Souped-up Engines

The Bf110C-7 was powered by two water-cooled Daimler-Benz DB 601P inverted V12 engines. These engines put out more than 1100hp and were mounted inboard on the wings. Interestingly, the water/glycol radiators were located under the wings instead of under the engines. Dragon has replicated these engines and radiators in great detail, making use of multiple-part assemblies to achieve greater levels of detail. To show off the engines, the engine cowling covers can either be assembled open or closed. The moveable propellers, too, are accurately shaped and exhibit a true-to-scale appearance.

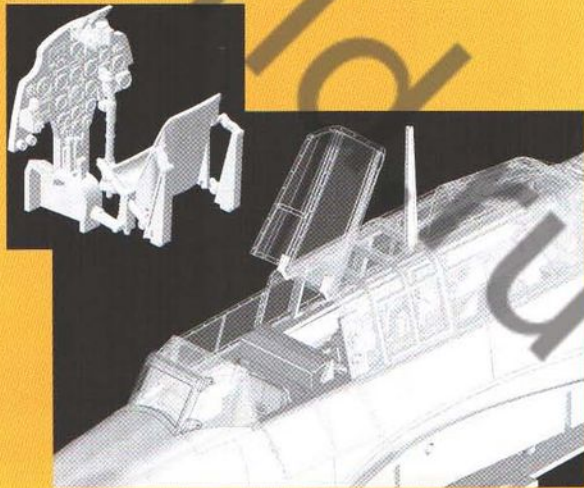

The Original "Wing Tech"

This new 1/32 scale Bf110C-7 is overflowing with details thanks to the influence of Dragon's technology. Individual components of the aircraft are captured realistically, aided by the widespread application of slide molds. Dragon has been producing Smart Kits in its AFV range for some time, and this aircraft has benefitted from the transfer of this technology to aircraft models. This means the kit is easy and pleasurable to assemble, yet suffers no loss in detail.

A Master's Degree in Interior Design

The Bf110 was designed to carry a crew of three (pilot, radio operator and gunner), although two was more common practice. All the detail of the cockpit on Dragon's 1/32 scale kit is realistically incorporated, and includes instrument panels, control sticks, radio, provision of three crew seats, and spare ammo for the 7.92mm MG 15 machinegun. In order to see all this cockpit detail, the canopy is made from transparent plastic. In practice, the gunner could raise the rear hood section of the canopy to give him a better field of fire, and this feature has also been included in the kit. Modelers have the choice of displaying this part open or closed.

Inside Story

You always have options

There are numerous photo-etched parts offered with the U.S.S. Gearing. Such metal components offer an incredible amount of detail and allow scale thickness to be achieved. Examples of photo-etched elements are: radar/antennas, propeller guard, funnel ladders and platforms, gun shields and weapon detail parts (e.g. hand wheels) etc. However, Dragon recognizes that some modelers may prefer working in plastic as well, so there are many parts of this Gearing which as options. One of the examples is the radar/antennas, they are offered as mold-on elements if modelers prefer not to work with the tiny complexities of photo-etched metal. Indeed, this ship looks fantastic even in just plastic incarnation because all the injection-molded parts are cleanly and sharply detailed, imparting a realism and authenticity to this destroyer kit.

Dragon breathes life into plastic

Any piece of military equipment is only as good as the people operating it. This adage equally applies to Dragon's new 1/350 scale model of the U.S.S. Gearing (DD-710). Offering crew figures is a new idea for Dragon and it adds welcome animation and life to the plastic kit.

This kit includes six miniature figures to populate its decks. They carry different poses, including four in combat action and a pair at rest. While six figures don't quite add up to the complement of 336 crewmen that normally operated this ship, each one is remarkably detailed with helmet and winter camouflage smocks. For that added touch of realism, Dragon designer even built the external passageway for these tiny 1/350-scale figures to access. With such a delicate design, for sure it will greatly increase customization possibilities and enjoyment to ship modelers.

INNOVATION & TECHNOLOGY

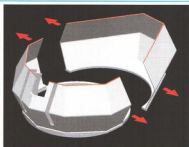

Dragon Zimmet represents a breakthrough in hi-tech molding techniques. Through extensive research and testing over an extended period of time, Dragon has developed high-quality injection-molded Zimmet for a variety of German armored vehicles. All miniature Zimmet patterns are created in the first place by a master-class modeler, which ensures the coating is natural looking and not mechanically regular in appearance. This handcrafted Zimmet application is subsequently realized as the basis for each injection-molded casting. A fine example of the modeler's touch in Zimmet is the unique radial pattern on the front superstructure of the Brummbar. Dragon's Zimmet demonstrates a human touch, just as the case was on original vehicles.

Weld Seams

RAZOR EDGE

Dragon's experienced engineers developed and perfect the most advanced slide-mold technology available in the kit industry to achieve a level of incredible thin! This technology Dragon calls it Razor Edge. One example is Flakpanzer IV Wirbelwind's turret. With its multi-faceted construction, the turret shape is very difficult to replicate. The Razor Edge treatment elegantly shaped turret with true-to-scale armor-plate edges.

MagicTrack

Sniffing glue fumes can be damaging to modelers' health, but there's something even worse... the mind numbing chore of cutting, filing, cleaning up and assembling runs of individual track links! That's why Dragon introduced Magic Tracks - individual links that are pre-cut and ready-to-assemble. These extremely convenient links have been seen on such kits as the Panzer IV Ausf.H, T-34 variant, Sd.Kfz.7/2 3.7cm Flak 37, and have saved countless modelers from insanity!

Using Dragon's vast injection-molding experience, kits have been upgraded and improved to the sharpness of detail. This is particularly evident in the weld seams of Panzer III Ausf.N kit. Many components such as the gun shield, turret, glacis plate and engine deck have received upgraded weld seams to make the tank appear more realistic. Overall, Dragon kit has been finely honed and toned.

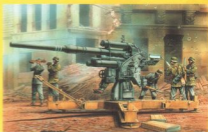

CAD/CAM

Even the inobservant would have noticed the computer-generated drawings that adorn Dragon kit boxes. These are a byproduct of the hi-tech CAD/CAM system utilized in all new kits and figure sets. Advanced computer-aided design and computer-aided manufacturing technology enhances the whole production process, resulting in kits that possess stunning accuracy. If you need proof of this, just look at the pictures on any Panzer IV or Tiger box, and the mind-boggling detail that is made possible with CAD/CAM.

With its Gen2 sets, Dragon has revolutionized the way modelers think about plastic figures. These new miniature 'beings' prove that unparalleled detail doesn't need to come at a cost, or that it doesn't have to mean the preserve of resin manufacturers. Using slide molds, the smallest and most subtle details on bodies and uniforms are possible, often through the use of separate parts such as hands, boots, collars or greatcoat skirts. Dragon has subsequently built upon the success of its Gen2 figures by offering Gen2 Gear. Old personal gear such as water bottles, helmets, bread bags, canteens, backpacks and bayonet holders have all been retooled. This means Dragon's Gen2 figures can operate and fight with top-flight gear that is right up to the task. These carefully researched Gen2 figures are now ready to get their Gen2 gear on, resulting in the best plastic figures of their generation!
